

David Johnston serves as a Solar System Ambassador for NASA and the Jet Propulsion Laboratory, as a Science Advisor for the Pisgah Astronomical Research Institute, and is co-founder of the AstroBrevard Astronomy Club. He has taught science, engineering, and math in both formal and informal settings for the over 20 years. Although his academic career was in computer science and robotics, David has been a life-long amateur astronomer. David and his wife, Caroline, have lived in Brevard for almost four years. They have two children, both of whom, for better or worse, are also “nerds”.
