

The 2026 Hunter's Full Moon Occurs on the night of October 25/26

The **Hunter's Moon** is defined as the first full Moon that follows the [Harvest Moon](#) each year. This year's Harvest Moon occurs on the night of September 26th – several days after the northern hemisphere's Autumnal Equinox.

The Hunter's full Moon will rise at sunset, and it will be with us all night, as it crosses the sky from east to west, setting at dawn. And, because this full moon occurs just 2 days before its closest approach to Earth for the month (perigee), it should appear noticeably larger.
